True Image Home 2010

Netbook Edition

Backup and Recovery designed specifically for Netbooks

Acronis® True Image Home 2010 Netbook Edition provides Netbook users with reliable and simple backup and recovery of systems, applications, settings and personal files. The intuitive graphical interface allows users to easily define where, locally and how often to backup a Netbook. Backup and recovery plans can be set up in just a few clicks, in order to protect and store systems and data to multiple locations. The variety of backup and restore capabilities, including disk imaging, and file backup provide ultimate protection for private systems and data. This unique consumer software offers a full set of advanced features in an affordable and easy-to-use solution, designed specifically for Netbooks.

Designed Specifically for Netbooks

Netbook systems are not just small laptops. Netbooks typically use a lower powered processor, have less memory, and smaller displays than traditional laptops. Acronis designed a special full-featured edition of Acronis True Image Home to work specifically on Netbooks. Get the same backup and recovery technology found in other Acronis products, designed to work on smaller, lower powered Netbook systems.

Backup before migrating to Microsoft® Windows 7

Protect your existing Netbook with a complete disk image before migrating to Windows 7 in case rollback is needed. In addition, Acronis software delivers more comprehensive functionality over Microsoft Windows 7 backup capabilities.

Virtual Hard Disk Support

Convert Acronis' backup images (.tib) into virtual hard disk files (.vhd) and vice versa, providing compatibility for Microsoft Windows 7 backup.

Powerful Scheduler

Acronis offers a wealth of scheduling options with a calendar view to build schedules and tasks. Suspend and enable tasks, specify dates to run tasks, and copy tasks to new dates
