In addition, Acronis Nonstop Backup™ delivers continuous system and data protection, preventing data loss. Acronis True Image Home 2010 meets home user needs with a simple, yet comprehensive, backup and disaster recovery solution. The variety of backup and restore capabilities, including disk imaging, file backup, and continuous data protection provide ultimate protection for private systems and data. This unique consumer software offers a full set of advanced features in an affordable and easy-to-use solution.

#### Support for Microsoft® Windows 7\*

- Delivers comprehensive functionality beyond Microsoft Windows 7's built-in backup capabilities.
- Protect your existing PC with a complete disk image before migrating to Windows 7 in case rollback is needed. Then mount the Acronis .tib disk image file and retrieve your data to a folder in the new operating system.
- Save backup images (.tib) as virtual hard disk (.vhd) files. Run your existing system as a virtual machine, or boot using Windows 7 Ultimate.

#### Easy-To-Use, Comprehensive Backup and Recovery

- User friendly solution with an intuitive graphical user interface, assistants and a smart scheduler.
- Create a full disk image of the PC's content, including OS, applications and settings.
- Bare metal restore – restore an entire hard drive content within minutes, not hours or days and without the hassle of reinstalling your system and applications.
- Data retention during restore – newer data on the hard disk is not overwritten during the restore process.
- Affordably priced solution that delivers comprehensive disaster recovery protection.

#### Advanced Functionality and Features

- Acronis Nonstop Backup™ provides continuous data protection, allowing recovery of your PC to any point in time.
- Try&Decide™ - Create a confined environment where you can safely try new software and browse the Web. After testing, you can decide whether to keep or discard changes to your system. Works across reboots and includes password protection for parental control.
- Acronis Secure Zone® is a secure partition on your hard drive from where you can restore a disk image very quickly.

#### New Features

- **Acronis Nonstop Backup™**  
Automatically creates incremental backups every five minutes allowing users to roll back their system, files, and folders to any point in time in the past.
- **Virtual Hard Disk Support**  
Convert Acronis' backup images (.tib) into virtual hard disk files (.vhd) and vice versa, allowing users to run existing systems as virtual machines.
- **New Powerful Scheduler**  
The new scheduler expands the number of scheduling options available. Use the new calendar view to build schedules and tasks. Suspend and enable tasks, specify dates to run tasks, and copy tasks to new dates.
- **Boot from Windows 7 image\***  
Windows 7 Ultimate users can boot from a backup image (.tib file) of their system partition. This will allow testing the ability to boot a backed up system without actual restoration. If the operating system boots from the .tib file, then it will boot when the need arises for a full system recovery.
